                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A single-stranded DNA (or its complementary strand or the corresp.

A single-stranded DNA (or its complementary strand or the corresp.

Gouble-stranded DNA) which comprises one of the 7837 "GS" sequences

Given in T19001-T26837 and which is able to hybridise to part of

human genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature)

Sequences were obtained from 3'-directed cDNA libraries prepared

sequences were obtained from 3'-directed cDNA libraries prepared

'c from various human tissues; synthesis of cDNA was initiated from the

'c and of mRNA by using poly(T) as the sole primer. Since the 3'-

call the 3'-oriented cDNA hybridise with Specific mRNAs. Each library

is constructed so as to reflect accurately the relative abundance of

C different mRNAs in the particular tissue from which it was derived.

The appearance frequency of a given GS in a cDNA library can be

c determined (esp. using primers and probes derived from the GS

sequences) as a means of diagnosing abnormal cell function or for

recognising different cell types.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                995 gatccggcttggacaggcacctgagatggtgccaaagtgcagctgactttcccacgaca 1054

The polynucleotides encoding human secreted proteins - derived from e.g. human blood, kidney, foetal lung, placenta, testes, brain, ovary, pltuitary, retina and colon cDNA libraries

E.g. human blood, kidney, foetal lung, placenta, testes, brain,

E.g. human blood, kidney, foetal lung, placente,

Claim 1; Page 321; 633pp; English.

Claim 1; Page 321; 633pp; English.

C. This sequence represents an expressed sequence tag (EST), and is a comply considered of the invention. The polynucleotides of the invention are all secreted EST sequences and proteins encoded by them are predicted to sources. The EST sequences and proteins encoded by them are predicted to have useful blological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities

C. freating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activity, chemotactic/chemokinentic activity, activity, chemotactic/chemokinentic activity, chemotactic/chemokinentic activity, activity, chemotactic/chemokinentic activity, chemotactic/chemokinentic activity, tumour inhibition activity, the EST sequences are also stated to be useful for gene

preventing inflammatory conditions

Claim 1; Page 114: 164pp; English.

This nucleic acid molecule comprises exon 3 of the novel human rules acid molecule comprises exon 3 of the novel human mucosal tascular addressin cell adhesion molecule MAGCAM-1 gene that maps to chromosome 19, band pl3.3. A MAGCAM-1 genomic clone that maps to chromosome 19, band pl3.3. A MAGCAM-1 genomic clone that maps to chromosome 19, band pl3.3. A MAGCAM-1 free form a cosmid library by screening with a human EST homologue of murine MAGCAM-1. The 5, untranslated region and exons 1-5 (see V38223-28), in various comprise the coding regions of MAGCAM-1(a) and its splice variants MAGCAM-1(b-e) (see V38210-05). Exons 2 and 3 encode the N-terminal immunoglobulin-like domains. The invention provided are diagnostic methods for detecting cancer or a provided are diagnostic methods for detecting cancer or a rithritis, rheumatory condition (e.g. transplant rejection, cernatosis, inflammatory conditions arthritis, infection detecting cancer or a rithritis, rheumatoid arthritis, infection, demandosis, inflammatory concephalitis), and therapeutic methods for treating an individual compounds for relates to a method of screening compounds for the invention also relates to a method of screening compounds for the oblity to regulate expression of MAGCAM-1(a-e) from its promoter.

obtd. by screening a L. tropica promastigote expression library with sera isolated from viscerotropic leishmaniasis patients. DNA molecules (see also T62135-37, T62139) encoding Leishmania entigens can be incorporated into vectors and used to produce recombinant antigens, or immunogenic portions of them, in host cells for use in vaccines against Leishmaniasis, or may themselves be used as sections for in vivo immunogen generation.

adhesion molecule that shows homology to murine MAGCAM-1. The designated MAGCAM-1(a) as well as 4 splice variants, designated MAGCAM-1(b), -1(c), -1(d) and -1(e) (see V38201-05).

These 5 nucleic acid molecules were discovered in a cDNA library farious from human foctal brain cells following a database search for human ESTS maving homology for mouse MAGCAM-1. The genes were also identified in cDNA libraries from the small intestine, colon, spleen and pancreas. The invention also provides MAGCAM-1(a-e) proteins (see W60607-11)/M vectors, host cells, recombinant methods of proteins (see W60607-11)/M vectors, host cells, recombinant methods of proteins (see W60607-11)/M vectors, host cells, recombinant methods of producing the polypeptides, as well as methods for detecting cancer or a pathological inflammatory condition, and thermpettic methods for treatting an individual in need of a capacity of fany of MAGCAM-1(a-e). Genomic DNA molecules comprising the 5' untranslated region and exons 1-5 (see V8223-28) which, in various combinations, comprise the coding of any of the MAGCAM-1 police variants are also claimed. The novel human MAGCAM-1 polypeptides can be used as a target for the diagnosis and treatment of inflammation conditions such as transplant rejection, arthritis, rheumatoid arthritis, infection, dermatosis, inflammatory bowel disease, and autoimmune encephalitis. Cc This nucleic acid molecule, designated clone HSKCW36, codes for human mucosal vascular addressin cell adhesion molecule MAdCAM-I(b) (see W860608), a novel cell surface adhesion molecule that shows composed to mucrime MAdCAM-I. The invention relates to human mucosal vascular as well as 4 splice variants, designated MAdCAM-I(b), and -1(e) see V38201-05). These 5 nucleic acid molecules were discovered in a CDNA library derived from human clocatel brain cells following a database search for human ESTS (compless were discovered in a CDNA library derived from human crocated brain cells following a database search for human ESTS (composed MadCAM-I). The genes were also identified in CDNA libraries from the small intestine, colon, spleen and composed in cDNA libraries from the small intestine, colon, spleen and carried propertides, as well as methods for identifying agonists and carried propertides, as well as methods for identifying agonists and carried propertides, as well as methods for detecting cancer or a pathological inflammatory condition, and therapeutic methods for treating an individual in need of a reduction in activity of any of the MAGCAM-I polypeptides can be comprise the coding region of any of the MAGCAM-I splipeptides can be conditions such as transplant rejection, arthritis, rheumatoid autoimmune disease, including chronic relapsing experimental autoimmune encephalities.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 3; Page 108-110; 156pp; English.

CDNA clone 20 (T39751) codes for human mucosal addressin cell
adhesion molecule-1 (MAdCAM-1) (W05322), whose cellular adhesion
molecule-1 (MAdCAM-1) (W05322), whose cellular adhesion
function is alpha4beta7 integrin-dependent and pref. is selective
for alpha4beta7. It was fisolated from a CDNA library prepd. from
mesenteric lymph nodes (MLN) of a patient with group's dagase,
using a macaque MAdCAM-1 CDNA clone (T39752) as probe. Another
clone (T39750), encoding a different human MAdCAM isoform (W05321),
was isolated from a histologically normal MLN library. MAdCAM
nucleic acids can be used fis probes to detect polymorphic or
allelic variants of MAGCAM, or used to produce recombinant MAMCAM
in host cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mucosal addressing cell adhesion molecule-1; MadCAM-1; inhibitor; leukocyte infiltration; disease; inflammatory bowel disease; linsulin-dependent diabetes mellitus; inflammatory bowel disease; ulcerative collitis; Crohn's disease; ileitis' coellac disease; nontropical Sprue; enteropathy; seronegative arthropathy; collitis; eosinophilic gastroenteritis; pouchitis; proctocolectomy; ileoanal anastomosis; alpha4-beta-integrin; ss.

New polypeptide(s) for inhibiting MadcAM-1-mediated interactions - useful for treatment of diseases associated with leukocyte

The special for treatment of diseases associated with leukocyte

Infiltration of tissues, especially inflammatory bowel disease and

Insular-dependent diabetes mellitus

CC fles specification describes inhibitors of mucosal addressing cell

adhesion molecule-1 (MAdcAM-1) mediated interactions. These inhibitors

CC madcam, and which have groups bonded to the N and C terminals.

CC madcan, and which have groups bonded to the N and C terminals.

CC with leukocyte infiltration of tissues expressing the MAdcAM-1,

CC with leukocyte infiltration of tissues expressing the MAdcAM-1,

mellitus. Inflammatory bowel disease and insulin-dependent diabetes

CC with leukocyte infiltration of tissues expressing the MAdcAM-1,

mellitus. Inflammatory bowel disease and insulin-dependent diabetes

CC specially inflammatory bowel disease, ilettis, coeliac disease,

contropathies, microscopic or collagenous collitis, coeliac disease,

arthropathies, microscopic or collagenous collitis, coeliac disease,

cc flecama nasstonosis: The inhibitors can also be used to inhibit the

conding of a cell expressing a ligand for MadcAM-1 or the cell surface to

comparison of antibodies which selectively bind MadCAM-1. These antibodies

cc gastroenteritis or inturn be used to identify cells expressing MadcAM-1. They are also useful in diagnostic and research applications,

confirmation of antibodies which selectively bind MadcAM-1. They are also useful in asmple. The compounds can also be

cut turn be used to identify cells expressing MadcAM-1 on their cell

can in turn be used to identify cells expressing madcam-1 cell

can in turn be used to identify cells expressing madcam-1 cell

can in turn be used to identify cells expressing the comparities of expression of this expressing madcam-1 cells

CDNA clone 4 (T39750) codes for human mucosal addressin cell
adhesion molecule-1 (MadCAM-1) (W05212), whose cellular adhesion
function is alpha4beta7 integrin-dependent and pref. is selective
for alpha4beta7. It was isolated from a cDNA library prepd. from
normal human mesenteric lymph nodes (MLN) using a macaque MAdCAM-1
cDNA clone (T39752) as probe. Another clone (T39751), encoding
a different human MAdCAM isoform (W05322), was isolated from the
MLN of a partient with Crohn's disease. MAdCAM nucleic acids can
be used as probes to detect polymorphic or allelic variants of
MAdCAM, or used to produce recombinant MAGCAMs in host cells.

The specification describes inhibitors of mucosal addressing cell

adhesion molecule-1 (MadGAM-1) mediated interactions. These inhibitors

adhesion molecule-1 (MadGAM-1) mediated anino acid motif LDTs of

comprise peptides which mimic the conserved amino acid motif LDTs of

ANAGAM-1, and which have groups bonded to the N and C terminals.

ANAGAM-1, and which have groups bonded to the N and C terminals.

CC minitures can be used for the treatment of a disease associated

with leukocyte infiltration of fissues expressing the MAdGAM-1,

cspecially inflammatory bowel disease and insulin-dependent diabetes

construction of infiltration of tissues expressing the MAdGAM-1,

construction of infiltration and insulin-dependent diabetes

confirmed infiltration of fissues expressing with seronegative

confirmed infiltration of an antibodies on the collagenous collitis, coelinc disease,

confirmed of a cell expressing a ligand for MAGCAM-1 on the cell surface to bonding of a cell expressing indiagnostic and research applications,

confirmed and used to identify cells expressing MAGCAM-1. These antibodies

confirmed in turn be used to identify cells expressing MAGCAM-1 on their cell

confirmed of this the surface of cells. The present sequence

confirmed of this the surface of cells. The present sequence

confirmed broad of this the surface of cells. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

PT 9019ucleotides - useful as diagnostic reagents and for prevention polyuucleotides - useful as diagnostic reagents and for prevention polyuucleotides - useful as diagnostic reagents and for prevention and canner. HIV infections and angina pectoris

PT and canner, HIV infections and angina pectoris

PT and canner, HIV infections and angina pectoris

PS claim 13; Page 15-17; 30Pp; English.

CC comprising the HTLARR3 nucleic acid are used for the recombinant comprising the HTLARR3 nucleic acid are used for the recombinant comprising the HTLARR3 nucleic acid are used for the recombinant comprising the HTLARR3 nucleic acid are used for the recombinant comprising the HTLARR3 nucleic acid are used for the recombinant comprising the HTLARR3 nucleic acid are used for the recently for antagonists. These can be used in treatment to screening for antagonists, agonists. These can be used in treatment to comprise or treated includes now lose and inflammatory disorders including osteoporosis, Adult Respiratory Disease Syndrome (ARDS), Rheumatorid arthritis, astham, allergies; bacterial, fungal, protezoan and viral infections, especially those caused by HIV-1 or protezoan and viral infections, especially those caused by HIV-1 or protezoan and viral infections, especially those caused by HIV-1 or protezoan and viral infury; cancers; anorexia; building prostatic hypertension; septic shock; pain; injury; cancers; anorexia; building prostatic hypertension; curliary retention; angina pectoris; ulcers; benign prostatic hypertension; and psychotic and neurological disorders, including schizophrenia, and psychotic and psychotic and neurological disorders; benign prostatic hypertension; anticers; and psychotic and neurological disorders; benign prostatic hypertension; anticers and psychotic and disorders including schizophrenia, and psychotic and as Huntington's disease or Gilles de la Tourette's and system. TLAR33 polypeptides are also useful for mapping genes to chromosomes, allowing gene inheritance to be studied 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        12-MAY-1999 (first entry)

This is the amino acid sequence of the human tumourigenesis

This is the amino acid sequence of the human tumourigenesis

is involved with cell proliferation and inflammation. It can be used

to stimulate cell proliferation for deals intended for

to stimulate cell proliferation of tumours or infections, or to treat

a wide range of cancers (adenocarcinoma, melanoma, sarcoma, lymphoma,

c leukaemia etc.), also inflammation where associated with infection or

immunological disease (e.g. asthma, cystic fibrosis, rheumatoid

arthritis). HTAP is also used to raise antibodies are used as for

clasmosis or monitoring of HTAP related diseases (in usual

immunoassays), in competitive drug screens and to isolate HTAP from

its natural sources. HTAP derived probes or primers, are used in

c standard amplification or hybridisation tests to diagnose HTAP-related

diseases; to identify related sequences; for genomic mapping and for 04-DEC-1998 (first entry)
Amino acid sequence of the human tumourigenesis associated protein.

proteins uescribes novel isolater numeral years are unsected for proteins they encode. The products of the invention are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or green therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Secretic uses are described for each of the 101 polynucleotides, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, tumours, neurodegenerative disorders, leukemias, diseases of the immune system, autoimmune diseases, hepatic and renal diseases of the immune system, altergies, Alzheimer's and cognitive disorders, schizophrenia, prostate calsestes, settled or cardiac muscle disorders, pulmonary disorders, cransplant rejection, disorders involving osteoclasts such as created in 197852-107993 and the encoding nucleic acids are represented in 197852-107993 and the encoding nucleic acids are represented in 196 AA; developmental abnormality; fetal deficiency; blood disorder; leukemia; immune system disease; autoimmune disease; hepatic disease; lymphoma; renal disease; inflammation; alleryy, alleryd, alleryd, as diseases; schizophrenia; cognitive disorder; prostate disease; skeletal; cardiac; muscle disorder; pulmonary disorder; transplant rejection; osteoclast; osteoporosis; arthritis; malignancy; digestive; endocrine; infection. New isolated human genes and the secreted polypeptides they encode Claim 1b; Page 285-286; 368pp; English. This invention describes novel isolated human genes and the secreted Carter KC, Duan DR, Endress GA, Feng P, Ferrie AM, Florence KA, Greene JM, Janat F, Lafleur DW, Ni J, Rosen CA, Ruben SM, Shi Y, Young P, Yu G; (HUMA-) HUMAN GENOME SCI INC. Claim 11; Fig. 104pp: English.

(WMK4-alpha) (W06320) has serine, threonine and tyroshne kinase activity, and mediates a signal transduction pathway that activates activity, and mediates a signal transduction pathway that activates activity, and mediates a signal transduction pathway that activates activity and activate protein (MAP) kinases p38 and JNK. It is an alternatively spliced form of MKK4-amma (W06322) and MKK4-beta (W06321) isoforms, which differ slightly at the NH2-terminus. MKK4 muscie. Recombinant MKK4 can be produced in transformed host cells.

Why: 99-L20V/1/LOV

New isolated mitogen-activated protein kinase kinase isoforms - used new isolated mitogen-activated protein kinase kinase isoforms - used to develop products for treating e.g. inflammatory disorders.

Py to develop products for treating e.g. inflammatory disorders.

Py axidative damage, proliferative disorders or autoimmune disorders oxidative damage, proliferative disorders.

CC This polypeptide comprises human mitogen activated protein (MAP)

CC Alnase kinase 4 alpha (MKK4 alpha, beta (see W97671) and gamma or compact of the collect

                                     New mitogen activated protein kinase kinase - useful for treating ischaemic heart disease, kidney failure etc., also for identifying ischaemic heart disease, kidney failure etc., also for identifying rischaemic heart disease, kidney failure etc., also for identifying modulators for treatment of similar conditions

25 Claim 15; Fig 7: 104ppp: English.

26 Novel human mitogen activated protein kinase kinase 4-beta

27 Novel human mitogen activated protein (MAP) kinases p38 and JNK. It is cativity, and mediates a signal transduction pathway that activates

28 On a leman mitogen-activated protein (MAP) kinases p38 and JNK. It is an alternatively spliced form of MKK4-gamma (W06322) and MKK4-alpha or is expressed in all tissues tested, but partic. In skeletal

29 NKKS (W06318-22) can be used in the treatment of MKK-related disorders, e.g. ischaemic heart disease and kidney failure, to dentify modulators of MKK activity, and to raise antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                  106 AYGSVNKMVHKP----SG-----OIMAVKRIRSTVDEKEQKQLLMDLDVVMRSS 150

This polypeptide comprises human mitogen activated protein (MAP) kinase kinase 4 beta (MKK4 beta). Its sequence was deduced from a cDNs clone (see X7008) derived from human brain mRNA. MKK4 includes 3 isoforms, termed MKK4 alpha (see W97670), beta and gamma (see W97672), that vary slightly at the N-terminus. MKK4 is a p38

MAP kinase kinase that also phosphorylates the JNK subgroup of MAP kinases. MKK3, MKK4, MKK6 and MKK7 (see W97664 and W97668-72), described in the invention, mediate the transduction of specific signals from the cell surface to the nucleus along specific pathways. They are useful for screening reagents which modulate MKK activity. Such agents can be used to prevent or treat MKK activity. Such agents can be used to prevent or treat MKK activity of sortismers, e.g. inflammation, oxidative damage or stress related disorders, e.g. inflammation, oxidative damage or alignancies of e.g. the skin, bone marrow, lung, liver, breast, malignancies of e.g. the skin, bone marrow, lung, liver, breast, inhibit the activity or expression of MKK inhibit cell growth or consequence apoptosis. MKK7 polynucleotides (see W07059-64) and sequence 393 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  93 --LOQALRLPPTSLKPDTFRDQLQELCIPQDLVGDLASVVFGSQRPLLDSVAQQQGAWL- 150

Novel human mitogen activated protein kinase kinase 4-gamma (MKK4-gamma) (W06322) has serine, threonine and troshe kinase activity, and mediates a signal transduction pathway that activates human mitogen-activated protein (MAP) kinases p38 and JNK. Its amino acid sequence was deduced from a cDNA clone (T43206) obtd. from a human foetal brain library. Alternative splicing of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated mitogen-activated protein kinase kinase isoforms - used to develop products for treating e.g. inflammatory disorders, vidative damage, proliferative disorders or autoimmune disorders or scample 1; Page 139; 168pp; English.

Example 1; Page 139; 168pp; English.

Kinase kinase damade (mkK4 gamma) Its sequence was deduced from kinase kinase damma (mkK4 gamma). Its sequence was deduced from cloudes 3 isoforms, termed MKK4 alpha (see W97670), beta (see W97671) and gamma, that vary slightly at the N-terminus. MKK4 is a pse MAP kinase kinase that also phosphorylates the JNK subgroup of MAP kinases. MKK3, MKK4, MKK6 and MK7 (see W97664 and W97668-72), castroined in the invention, mediate the transduction of specific pathways. They are useful for screening reagents which modulate CC signals from the cell surface to the nucleus along specific pathways. They are useful for screening reagents which modulate CC stress-related proliferative disorders, e.g. psoriasis, AIDS, castrointestinal system and genito-urinary tract. Agents which complish the activity or expression of MKK inhibit cell growth or cause apoptosis. MKK7 polynucleotides (see X07059-64) and
                                                                                                                                                                                                                                                                                    --LOGALRLPPTSLKPDTFRDQLQELCIPQDLVGDLASVVFGSQRPLLDSVAQQQGAWL- 150
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sequence yields MKK4 isoforms alpha (W06320) and beta (W06321).
MKK4 is expressed in all tissues tested, but partic. in skeletal
muscle. Recombinant MKK4 can be produced in transformed host cells.
MKKs (W06318-22) can be used in the treatment of MKK.related
disorders, e.g. ischaemic heart disease and kidney failure, to
identify modulators of MKK activity, and to raise antibodies.
                                                                                                                                                                                                                         89; Indels 100; Gaps

The polypeptide is recognised by auto-antibodies in the serum of a bullous pemphigoid patient and by a human anti-basement membrane zone monoclonal antibody. It can be used for diagnosis of bullous pemphigoid. See also Q15020.

Example 2; Column 23-28; 34pp; English.

This sequence is the E. coll 7-keto-8-aminopelargonic acid (KAP)

This sequence is the E. coll 7-keto-8-aminopelargonic acid (KAP)

Synthetrase. The gene can be used in the transpenic plant of the

invention. The transgenic plant, plant cell or plant tissue is

transformed with a chimeric gene encoding diaminopelargonic acid (DAP)

aminotransferase or biotin synthase and produces more biotin than a

non-transgenic plant, cell or tissue. The plant is used as an improved

dietary source of biotin (vitamin H) for humans or animals.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Plasmid contg. gene(s) for expression of biotin synthetase enzymes - derived from L.coli and capable of replication and expression in other microorganisms, esp. yeast.

Table 6; page 39-40; 52pp; English.

The enzyme is expressed by the E.coli bio F.gene. It is a biotin synthetase enzyme, and permits the transformant to grow in the absence of sequence 383 AA;

The present sequence is a lipase isolated from Pseudomonas sp. 20705 (FBRM BP-4772), which is industrially useful in detergents, food processing, paper manufacture and oil manufacture, etc. . A vector containing the lipase gene can be used for the recombinant production of the lipase in transformed hosts, especially Pseudomonas 20705, P. alcaligenes SD702 or Bacillus NKS-21. Sequence 335 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure: Page 23; 44pp; English.

The lipase gene from Pseudomonas pseudoalcaligenes MI was cloned is 2. coli as in Ep-334462. The DNA sequence of insert Pvul/Econt contains two open reading frames, one encoding the lipase gene, the other encoding a putative lipase modulator gene which increases the lipase productivity in a homologous host cell. The lipase obtd. is detergents or diagnostic reagents.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 27, Application US/08369822C
Patent No. 6015660
GENERAL INFORMATION:
APPLICANT: Lipkin, W. I.
APPLICANT: Kliche, Stefanie
APPLICANT: Schneider, Patrick A.
APPLICANT: Schneemann, Anette
TITLE OF INVENTION: Borna Disease Viral Sequences,
TITLE OF INVENTION: Diagnostics and Therapeutics for Central Nervous
TITLE OF INVENTION: System Diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         54 -FVVSSLQGEDCRDGVQRLGVSANLPEEQLGALLAGMHTLLQQALRLPPTSLKPDTFRDQ 112

230k bullous pemphigoid antigen BPMI - mouse (fragment)
C;Species: Mus musculus (house mouse)
C;Date: 28-May-1993 #sequence_revision 28-May-1993
C;Accession: A60776
R;Amagai, M.; Haahimoto, T.; Tajima, S.; Inokuchi, Y.; Shimizu, N.; Saito, M.; Miki, J. Invest. Dermatol. 95, 252-259, 1990
A;Title: Partial cDNA cloning of the 230 kD mouse bullous pemphigoid antigen by use castaction: A60776; MUD:90347244
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Manioc,7-oxononanoate synthase (EC 2.3.1.47) - Escherichia coli
N.Alternate names: 7-KAP synthetase, 7-keto-8-amino pelargonic acid synthetase
(Species: Escherichia coli
